Prerequisites if any	
<b>Learning objectives</b>	<ol style="list-style-type: none"> <li>1. Outline software engineering principles and activities involved in building large software programs. Identify ethical and professional issues and explain why they are of concern to Software Engineers.</li> <li>2. Describe the process of requirement gathering, requirement classification, requirement specification and requirements validation.</li> <li>3. Explain the role of DevOps in Agile Implementation.</li> <li>4. Discuss various types of software testing practices and software evolution processes.</li> <li>5. Recognize the importance Project Management with its methods and methodologies.</li> <li>6. Identify software quality parameters and quantify software using measurements and metrics. List software quality standards and outline the practices involved</li> </ol>

**Course Outcomes:**

*On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
CO1	Understand the activities involved in software engineering and analyze the role of various process models.	Understanding
CO2	Discuss the basics of Modeling techniques and illustrate the usage of the modeling techniques.	Apply
CO3	Illustrate the use of Testing Strategies and understand the importance of Agile methodology and DevOps	Apply
CO4	Illustrate the role of project planning, Management, and quality management in software development	Apply
CO5	Discuss the importance of activity planning and planning models and Software Quality	Understanding

**Mapping with POs and PSOs:**

Sl. No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Introduction to Software Engineering</b>				
1.1	Introduction: The evolving role of software, Software, The changing nature of software	2	-	-
1.2	Software Engineering, A Process Framework, Process Patterns	2	-	-
1.3	Process Assessment, Personal and Team Process Models	1	-	-
1.4	Process Technology, Product and Process	1	-	-
	<b>Textbook 1: Chapter 1: 1.1 to 1.3</b>	-	-	-
1.5	Process Models: Prescriptive models, Waterfall model	1	-	-
1.6	Incremental process models, Evolutionary process models, Specialized Process Models	1	-	-
	<b>Textbook 1: Chapter 2: 2.1, 2.2, 2.4 to 2.7</b>	-	-	-
<b>Module – 2: Requirement Engineering</b>				
2.1	<b>Requirements Engineering:</b> Requirements Engineering Task	1	-	-
2.2	Initiating the Requirements Engineering process, Eliciting Requirements	1	-	-
2.3	Developing use cases, Building the analysis model, Negotiating Requirements, Validating Requirements, Software Requirement Document	2	-	-
	<b>Textbook 1: Chapter 3: 3.1 to 3.6, Textbook 5: Chapter 4: 4.2</b>	-	-	-
2.4	<b>Building the Analysis Models:</b> Requirement Analysis, Analysis Model Approaches	1	-	-
2.5	Data modeling Concepts, Object Oriented Analysis	1	-	-
2.6	Scenario-Based Modeling, Flow-Oriented Modeling	1	-	-
2.7	class Based Modeling, Creating a Behavioral Model	1	-	-
	<b>Textbook 1: Chapter 8: 8.1 to 8.8</b>	-	-	-
<b>Module – 3: Software Testing &amp; Agile Methodology</b>				
3.1	<b>Software Testing:</b> A Strategic Approach to Software Testing	1	-	-
3.2	Strategic Issues, Test Strategies for Conventional Software	1	-	-
3.3	Test Strategies for Object -Oriented Software, Validation Testing	1	-	-
3.4	System Testing, The Art of Debugging	1	-	-
	<b>Textbook 1: Chapter 13: 13.1 to 13.7</b>		-	-

3.5	<b>Agile Methodology &amp; DevOps:</b> Before Agile – Waterfall, Agile Development	1	-	-
3.6	What is DevOps?, DevOps Importance and Benefits, DevOps Principles and Practices, 7 C's of DevOps Lifecycle for Business Agility	1	-	-
3.7	DevOps and Continuous Testing, How to Choose Right DevOps Tools? Challenges with DevOps Implementation	2	-	-
	<b>Textbook 3: Chapter 2: 2.1 to 2.9</b>	-	-	-
<b>Module – 4: Project Management</b>				
4.1	<b>Introduction to Project Management:</b> Introduction, Project and Importance of Project Management	1	-	-
4.2	Contract Management, Activities Covered by Software Project Management	1	-	-
4.3	Plans, Methods and Methodologies, Some ways of categorizing Software Projects	2	-	-
4.4	Stakeholders, Setting Objectives, Business Case, Project Success and Failure	2	-	-
4.5	Management and Management Control, Project Management life cycle, Traditional versus Modern Project Management Practices	2	-	-
	<b>Textbook 2: Chapter 1: 1.1 to 1.17</b>	-	-	-
<b>Module – 5: Activity Planning &amp; Software Quality</b>				
5.1	<b>Activity Planning:</b> Objectives of Activity Planning, When to Plan	1	-	-
5.2	Project Schedules, Sequencing and Scheduling Activities	1	-	-
5.3	Network Planning Models, Forward Pass– Backward Pass, Identifying critical path, Activity Float	1	-	-
5.4	Shortening Project Duration, Activity on Arrow Networks	1	-	-
	<b>Textbook 2: Chapter 6: 6.1 to 6.16</b>	-	-	-
5.5	<b>Software Quality:</b> Introduction, The place of software quality in project planning	1	-	-
	Importance of software quality, software quality models	1	-	-
	ISO 9126, quality management systems, process capability models	1	-	-
	Techniques to enhance software quality, quality plans	1	-	-
	<b>Textbook 2: Chapter 13: (13.1 to 13.6 , 13.9, 13.11, 13.14)</b>	-	-	-

3.1	<b>Unicast Routing:</b> Routing Algorithms: Distance Vector Routing,	1	-	-
3.2	Link state Routing	1	-	-
3.3	Unicast Routing Protocols: Routing Information Protocol(RIP)	1	-	-
3.4	OSPF	1	-	-
3.5	Border Gateway Protocol(BGP):operation of External BGP(e BGP), Operation of Internal BGP (e BGP)	2	-	-
3.6	<b>Multicast Routing:</b> Introduction, Unicasting, Multicasting, broadcasting	1	-	-
3.7	MOSPF	1	-	-
<b>Module– 4: Transport Layer</b>				
4.1	<b>Transport Layer:</b> Transport Layer Services: process-to-process communication, ICANN Ranges, Encapsulation and Decapsulation, Multiplexing and Demultiplexing, Flow control and Error Control	1	-	-
4.2	Connectionless and connection-oriented service, Transport Layer protocols: Introduction, services, port numbers	1	-	-
4.3	User Datagram Protocol: User Datagram and UDP services	1	-	-
4.4	Transmission Control Protocol: TCP services, TCP features, Segment			
4.5	TCP connection, Windows in TCP, Flow control(in brief)			
4.6	Error control :checksum,acknowledgement, generating acknowledgement, Retransmission- Retransmission after RTO, Retransmission after 3 duplicates, Out of order segments			
4.7	TCP congestion control: congestion window, congestion detection, Congestion policies, fast recovery	1	-	-

<b>Module –5:Application Layer</b>				
5.1	<b>Application Layer:</b> Application-LayerParadigms,Application ProgrammingInterface(Socketandsocketaddress)	2	-	-
5.2	<b>StandardClientServerProtocols:</b> WorldWideWeb	1	-	-
5.3	HTTP	1		
5.4	FTP	1	-	-
5.5	ElectronicMail	1		
5.6	TELNET	1		
5.7	SecureShell(SSH)-components,Domain NameSystem (DNS)	1	-	-
<b>Total No. of Hours</b>		<b>40Hours</b>		

<b>List of Experiments</b>				
1	Study of networking devices like Hub, Repeater ,Bridge, Switch, Router, Gateway, Access point, MODEM and NIC			1
2	Write a program to implement the following Error Detection Techniques a. Cyclic Redundancy Check(CRC) b. Check sum			1
3	a) Introduction to Cisco packet tracer. b) Create basic topologies and assign IP address, subnet mask, gateway IP address and test connectivity using PING command.			1
4	Perform: a) An Initial Switch Configuration. (Host name, Console password, vty password, Privileged EXEC mode password, Privileged EXEC mode secret, IP address on VLAN1 interface, Default gateway) b) An Initial Router Configuration. (Configure the router host name, configure the passwords, configure the banner messages, verify the router configuration)			1
5	Configure and implement DHCP service in a Local Area Network. also Configure Cisco Router as a DHCP sever.			1
6	a. Implement the Static Routing and Default Routing. b. Configure WEP on a Wireless Router.			1
7	Configure Dynamic Routing using RIP.			1
8	Using TCP/IP sockets, write a client–server program to make the client send the file name and to make the server send back the contents ofThe requested file if present.			1
9	ConfigureandimplementDNSservice.			1
10	Defining and using Access Control Lists.			1

**L:T:P - 3:2:0**

**CIE: 50 Marks**

**Max. Marks: 100**

<b>Prerequisites if any</b>	Any Programming language, Discrete Mathematical structures
<b>Learning objectives</b>	1. To give an overview of the theoretical foundations of computer science from the perspective of formal languages and illustrate finite state machines to solve problems in computing 2. To familiarize Regular grammars, context free grammar and also to explain the hierarchy of problems arising in the computer sciences.

**Course Outcomes:**

*On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
CO1	Discuss basic concepts of formal languages of finite automata techniques	Understand
CO2	Design Finite Automata's for different Regular Expressions and Languages	Apply
CO3	Construct context free grammar for various languages	Apply
CO4	Solve various problems of applying normal form techniques, push down automata and Turing Machines	Analyze

**Mapping with POs and PSOs:**

### Course Structure

Sl.No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Introduction to Automata Theory</b>				
1.1	Central Concepts of Automata Theory	1		
1.2	Finite Automata - Deterministic Finite Automata	2	1	
1.3	Non Deterministic Finite Automata, NFA to DFA	2		
1.4	Finite Automata with Epsilon Transitions	1		
1.5	Elimination of Epsilon Transitions	2	1	
<b>Module – 2: Regular Expressions and Languages</b>				
2.1	Regular Expressions	2		
2.2	Finite Automata and Regular Expressions – DFA to Regular Expression – Kleen's closure	2	1	
2.3	Finite Automata to Regular Expression – State elimination	2		
2.4	Regular Expression to Finite automata	1	1	
2.5	Applications of Regular Expressions	1		
<b>Module – 3: Properties of Regular Languages, Context Free Grammars</b>				
3.1	Proving Languages not to be regular, Closure Properties of regular languages	2		
3.2	Equivalence and Minimization of Automata	2	1	
3.3	Context Free Grammars	2	1	
3.4	Leftmost, rightmost Derivations, Parse Trees, Ambiguity in Grammars	2		
<b>Module – 4: Pushdown Automata</b>				
4.1	Pushdown Automata, Languages of PDA	2	1	
4.2	Equivalence of PDA and CFG – Grammars to PDA	2		
4.3	Elimination of Epsilon, Unit Productions, Useless productions	2	1	
4.4	Chomsky Normal Form	2	1	
<b>Module – 5: Turing Machines</b>				
5.1	Introduction to Turing Machines	2		
5.2	Notation, Instantaneous description and transitions of Turing Machine	2	1	
5.3	Post's Correspondence Problem	2		
5.4	Introduction to Class P and NP problems	2

Row 3 Cell 1														
3	<p>Create a visually appealing webpage that showcases the CSS box model by applying styling to a &lt;div&gt; element, incorporating padding, margins and borders. Additionally, include an image and a hyperlink within the page to enhance the layout.</p>	CO1												

4	<p>Write a JavaScript program that demonstrates how to handle events from different HTML elements. The program should:</p> <ol style="list-style-type: none"> <li>1. Trigger an alert when the user clicks anywhere on the body of the page.</li> <li>2. Change the text of a button when it is clicked and display a success message below the button.</li> <li>3. Dynamically update a paragraph with the text entered in a text box as the user types.</li> <li>4. Display a password strength message (weak, medium, or strong) based on the length of the entered password, updating the message as the user types.</li> <li>5. Ensure that the program uses appropriate event handlers for each element and explains the purpose of each event handler in the program.</li> </ol>	CO2
5	<p>Create a JavaScript program where a random number between 1 and 100 is generated and the user is prompted to guess the number. Provide feedback on whether the guess is too high, too low, or correct, and allow the user to keep guessing until they get it right. After a correct guess, ask if they want to play again using confirm(); if yes, restart the game, otherwise, display "Thanks for playing!" and end the program.</p>	CO2
6	<p>Write a JavaScript program to create an array of student objects, convert their marks to CGPA using the map method and display a list of students with a CGPA of 9 or higher. Also, show the total count of students with CGPA 9 and above using the filter and reduce methods.</p>	CO2
7	<ol style="list-style-type: none"> <li>1. Create an HTML page with a list of items, a few buttons and some paragraphs.</li> <li>2. Write JavaScript to do the following: <ol style="list-style-type: none"> <li>a) Change the background color of an element by its id.</li> <li>b) Change the text color of all list items (&lt;li&gt; ) to blue.</li> <li>c) Change the text of all buttons to "Clicked!" when clicked.</li> <li>d) Increase the font size of all paragraphs.</li> <li>e) Select the first element with a specific class and change its text.</li> </ol> </li> </ol>	CO2
8	<p>Demonstrate all the methods of mounting and updating phase of react class Component by changing the city name from “Mysore” to “Bangalore” after 2 seconds and display the same.</p>	CO3
9	<p>Illustrate react program to implement error boundaries to find</p> <ol style="list-style-type: none"> <li>1. Division by zero error.</li> <li>2. Array index of out of bound.</li> </ol>	CO3
10	<p>Implement a React functional component that:</p> <ol style="list-style-type: none"> <li>1. Accepts an age prop and displays it inside a heading (&lt;h1&gt;).</li> <li>2. Includes an input field and a button that allows the user to update the age in the heading using a state variable (utilizing useState&amp;useEffect).</li> </ol>	CO3
11	<p>Write a react program to create a list of departments and iterate through all the elements of the list and return an unordered list with each department as a list item using a function component.</p>	CO3
12	<p>Write a react function component to create a counter that is incremented by one on button click and display a message 'End of the count ' when count reaches 10.</p>	CO3

13	Write a Node.js program to read input from the console and store it in a file using file server module.	CO4
14	<p>Apply the concept of custom modules in Node.js.</p> <ol style="list-style-type: none"> <li>1. Create a custom module fileOperations.js with functions to read a file, write to a file and append data to a file.</li> <li>2. Use this module in another file app.js to demonstrate its functionality by performing file operations.</li> </ol>	CO4
15	Illustrate how to add an event listener, emit an event to trigger the listener and then remove the event listener in node.js.	CO4
16	<p>Explain various debugging and logging methods in Node.js with example to demonstrates the following:</p> <ol style="list-style-type: none"> <li>1. Measuring execution time of code blocks.</li> <li>2. Grouping related log messages and displaying them hierarchically.</li> <li>3. Using assertions to conditionally display error messages.</li> <li>4. Displaying data in a tabular format.</li> <li>5. Logging debugging details for analysis.</li> </ol>	CO4
17	<p>Write a Node.js program to:</p> <ol style="list-style-type: none"> <li>1. Create an HTTP server that listens on port 8000.</li> <li>2. Respond with “Welcome to Nodejs” when the root URL (/) is accessed.</li> <li>3. Return a 404 status with a custom message for all other routes.</li> </ol>	CO4
18	<p>Demonstrate the following MongoDB operations</p> <ol style="list-style-type: none"> <li>1. Write a script to create a new database named CollegeDB and a collection named students.</li> <li>2. Insert three documents into the students collection with fields name, age, sem, usn and grade.</li> <li>3. Insert multiple documents into a collection named courses with fields courseName, courseCode, and credits.</li> <li>4. Write queries to retrieve all documents from the students collection.</li> <li>5. Retrieve all documents where the age is greater than 18.</li> <li>6. Write a query to find all students with a grade of "A".</li> <li>7. Write a query to find all courses with credits greater than or equal to 3.</li> </ol>	CO5
19	<p>Demonstrate the following operations using Mongo shell script</p> <ol style="list-style-type: none"> <li>1. Switch to the WorkDB database.</li> <li>2. Create a teachers collection.</li> <li>3. Insert documents with fields name, subject and experience.</li> <li>4. Use the Mongo shell to export the students collection to a JSON file.</li> <li>5. Import the JSON file back into a new collection named studentsBackup.</li> </ol>	CO5
20	<p>Write a MongoDB aggregation query for the following to analyze an employees collection with an example for each: Group the employees by their department and calculate the total number of employees in each department. The average salary of employees in each department.</p> <ol style="list-style-type: none"> <li>1. Sort the aggregated results by the total number of employees in descending order.</li> <li>2. Example Data in the employees Collection.</li> </ol>	CO5

**Code:BCS505****Course: Full Stack Development****Credits: 3****L:T:P - 3:0:0****SEE: 50****CIE: 50****SEE Hours: 3 Max. Marks: 100**

<b>Prerequisites if any</b>	Computer networks
<b>Learning objectives</b>	<ol style="list-style-type: none"> <li>1. Create web page using HTML &amp; CSS</li> <li>2. Develop familiarity with the JavaScript language, realize concepts commonly used in dynamic language programming, such as introspection, higher-order functions, closures, familiar with common libraries and tools that are used in web application development.</li> <li>3. To Create React Components, lifecycle of components, rendering list and portal and perform some simple tests, and error handling.</li> <li>4. To create Node.js modules, events and database access and interact with databases using MongoDB .</li> </ol>

**Course Outcomes:***On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
CO1	Prepare web pages using HTML and CSS.	Apply
CO2	Apply core constructs and event handling mechanisms of JavaScript to develop webPages.	Apply
CO3	Build interactive web applications using ReactJS	Analyze
CO4	Develop interactive web applications using Node.js and Express.js.	Apply
CO5	Demonstrate the creation of dynamic web pages and connecting to MYSQL/MongoDB	Apply

### Course Structures

Nos.	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Modules -1:HTML &amp;CSS</b>				
1.1	Introduction to HTML, Basic syntax, Standard HTML Document Structure, Images,	1	-	-
1.2	Paragraphs, Line Breaks, Heading Tags, Font Styles, Sizes, Color, Character Entity	1	-	-
1.3	links, Lists, tables, form tags, Font properties, text decoration, List property,	2	-	-
1.4	CSS Colors and background, CSS Box Model, CSS Margins, Padding, Borders. Background images, span and div tags, Grid and flex.	2	-	-
<b>Module 2: JavaScript</b>				
2.1	Introduction to JavaScript, General syntactic characteristics	1	-	-
2.2	Primitives, operations, expressions	1	-	-
2.3	Screen output and keyboard input, Control statements,	1	-	-
2.4	Object creation &modification, arrays, array methods, Functions,	2	-	-
2.5	JavaScript and XHTML Documents: The JavaScript execution environment, TheDocument Object Model, Element access in JavaScript, Events and event handling,	2	-	-
2.6	Handling events from the Body elements, Button elements, Text box and Password elements.	2	-	-
<b>Module – 3: ReactJS</b>				
3.1	Introduction, Templating using JSX	1	-	-
3.2	Components, State, Props, Hooks	2	-	-
3.3	Lifecycle of Components	2	-	-
3.4	Rendering List and Portals	2	-	-
3.5	Error Handling, Routers	2	-	-
<b>Module4: NodeJS</b>				
4.1	Node.js overview, Node.js – basics and setup.	1	-	-
4.2	Node.js console, Node.js command utilities	1	-	-

4.3	Node.js modules, Node.js concepts	2	-	-
4.4	Node.js events, Node.js database access.	2		-
4.5	Introduction to Express.js <ul style="list-style-type: none"> <li>• Creating routes (GET, POST, PUT, DELETE)</li> <li>• Handling request and response objects</li> <li>• Middleware in Express (built-in, custom, third-party)</li> </ul>	2		
<b>Module 5: MongoDB</b>				
5.1	MongoDB basics: Documents, collections, database query language, mongo shell.	2	-	-
5.2	MongoDB CRUD operations (create, read, projection, update, delete aggregate)	2	-	-
5.3	reading from MongoDB, writing from MongoDB	2	-	-
5.4	MongoDB with PHP, MongoDB with NodeJS	2	-	-

## Course Structure

Sl No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Research Methodology: An Introduction, Defining the research problem</b>				
1.1	Meaning of Research, Objectives of Research Motivation in Research	1	-	-
1.2	Types of Research, Research Approaches, Research Methods versus Methodology, Research and Scientific Method.	2	-	-
1.3	Research Process.	1	-	-
1.4	Criteria of good research, what is a Research Problem?	1	-	-
1.5	Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem.	1	-	-
<b>Module – 2: Research Design, Methods of data collection</b>				
2.1	Meaning of Research, Design, Need for Research Design	1	-	-
2.2	Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs.	2	-	-
2.3	Collection of Primary Data, Observation Method, Interview Method Collection of Data through Questionnaires.	2	-	-
2.4	Collection of Data through Schedules, Difference between Questionnaires and Schedules ,Some Other Methods of Data Collection, Collection of Secondary Data, Selection of Appropriate Method for Data Collection	1	-	-
<b>Module – 3: Sampling Design</b>				
3.1	Census and Sample Survey, Implications of a Sample Design	1	-	-
3.2	Steps in Sampling Design, Criteria of Selecting a Sampling Procedure	1	-	-
3.3	Characteristics of a Good Sample Design, Different Types of Sample Designs	2	-	-
3.4	How to Select a Random Sample? Random Sample from an Infinite Universe Complex Random Sampling Designs	1	-	-
<b>Module – 4: Interpretation and Report Writing</b>				
4.1	Meaning of Interpretation, Why Interpretation? Technique of Interpretation Precaution in Interpretation	1	-	-
4.2	Significance of Report Writing, Different Steps in Writing Report	2	-	-
4.3	Layout of the Research Report, Types of Reports, Oral Presentation	1	-	-
4.4	Mechanics of Writing a Research Report, Precautions for Writing Research Reports, Conclusions	1	-	-
<b>Module – 5: Introduction to Intellectual Property</b>				

5.1	Role of IP in the Economic and Cultural Development of the Society, IP Governance, Conditions for Obtaining a Patent Protection, To Patent or Not to Patent an Invention, Rights Associated with Patents, Enforcement of Patent Rights, Inventions Eligible for Patenting, Process of Patenting	1	-	-
5.2	Classes of Copyrights, Criteria for Copyright Ownership of Copyright, Copyrights of the Author, Copyright Infringements, Copyright Registration, Copyright Symbol Validity of Copyright.	2	-	-
<b>Total No. of Lecture Hours</b>		<b>25</b>	-	-
<b>Total No. of Tutorial Hours</b>		<b>00</b>	-	-
<b>Total No. of Practical Hours</b>				<b>00</b>

### **Textbook:**

1. Kothari, C.R., (2014), Research Methodology, New Age International second revised edition
2. Prof. RupinderTewari, Ms. MamtaBhardwaj (2021) Intellectual Property A Primer for Academia.

### **Reference Book:**

1. Ranjit Kumar, (2011). Research Methodology a step by step guide for beginners, Sage Publications
2. Chawla, Deepak &Sondhi, Neena (2011). Research methodology: Concepts and Cases, Vikas Publishing House Pvt. Ltd. Delhi.

**Ability Enhancement Course / Skill Enhancement Course-V**

BCSL657 A	Progressive App Development	BCS657D	Devops
BCSL657 B	Tosca – Automated Software Testing		
BCS657C	Agile Development		

**Code: BCS601      Course: Internet of Things****Credits: 4      L:T:P - 3:0:2****SEE: 100 Marks****CIE: 50 Marks****SEE Hours: 3****Max. Marks: 100**

<b>Prerequisites if any</b>	Fundamentals of Networking and Basic Programming Languages (C, C++ & Python)
<b>Learning objectives</b>	<ul style="list-style-type: none"> <li>To understand the fundamentals of the Internet of Things and its building blocks along with their characteristics</li> <li>To analyze the role of data, data analytics, and IoT endpoints in IT and OT</li> <li>To assess the impact of IoT in real world</li> </ul>

**Course Outcomes:***On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
CO1	Describe the IoT architecture and explain the role of sensors in IoT systems.	Understanding
CO2	Implement basic Arduino programming concepts to interface actuators in IoT applications.	Apply
CO3	Illustrate various interoperable IoT protocols for wireless devices	Apply
CO4	Analyze IoT data analytics techniques, challenges, and security measures.	Analyze
CO5	Analyzing real-world scenarios using IoT	Analyze

**Mapping with POs and PSOs:**

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12		PSO1	PSO2

CO4	3	3	3	1		1	1	1	1	1		1		1	2
CO5	3	3	3	1				1	1	1		1		1	2

**Mapping Strength: Strong– 3      Medium – 2      Low – 1**

**Course Structure**

Sl.No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Introduction to Internet of Things and Sensors</b>				
1.1	Introduction to IoT: Definition, Characteristics of IoT	1	-	-
1.2	IoT Architecture	1		
1.3	Sensors, Types of Sensors	3		
1.4	Characteristics and Selection of Sensors	3	-	-
<b>Module – 2: Actuators and controllers</b>				
2.1	Actuators and Types of Actuators	2	-	-
2.2	Characteristics and Selection of Actuators	2		
2.3	Introduction to Arduino: Architecture and GPIO pin structure.	2		
2.4	Fundamentals of Arduino programming	2	-	-
<b>Module – 3: Communication Technology</b>				
3.1	M2M, Difference Between IoT and M2M	3	-	-
3.2	Communication protocols: LoRaWAN, WIFI	2	-	-
3.3	Data and Network Protocols: MQTT, COAP & HTTPS	3		
<b>Module – 4: Data and Analytics for IoT</b>				
4.1	An introduction to data analytics for IoT.	1	-	-
4.2	Structured versus unstructured data, IoT data analytics overview.	2		
4.3	IoT data analytics challenges, Edge streaming analytics.	2	-	-
4.4	Securing IoT: OT security, common challenges in OT security.	3		
<b>Module – 5: IoT Case Studies</b>				
5.1	Case studies: Home Automation	1	-	-
5.2	Smart Cities	1	-	-
5.3	Agriculture	2		

5.4	Healthcare	2		
5.5	Defense	2		
<b>IoT Lab Programs</b>				
1	Introduction to working IDE and its practice			1
2	Sense the available networks using Arduino			1
3	Measure the distance using ultrasonic sensors and mal LED Blinkusing Arduino			1
4	Detect the vibration of an object using Arduino			1
5	Connect with the available Wi-Fi using Arduino			1
6	Temperature notification using Arduino			1
7	LDR to vary light intensity of LED using Arduino			1
8	Creation of Things Speak Account			1
<b>Total No. of Lecture Hours</b>		<b>40</b>	-	-
<b>Total No. of Tutorial Hours</b>			<b>00</b>	-
<b>Total No. of Practical Hours</b>				<b>10</b>

**Textbook:**

- Arshdeep Bahga, Vijay Madisetti, "Internet of Things- A Hands-On Approach", Universities press, 2014.

**Code:BCS602****Course:Machine Learning****Credits:3****L:T:P-3:0:0****SEE: 50Marks****CIE:50 Marks****SEEHours:3****Max.Marks:100**

<b>Prerequisites if any</b>	Programming Language, Mathematics foundations (Linear algebra, Probability, Statistics)
<b>Learning objectives</b>	<ol style="list-style-type: none"> <li>1. To introduce the fundamental concepts and techniques of machine learning.</li> <li>2. To understand the various types of machine learning and the challenges faced in real-world applications.</li> <li>3. To familiarize with machine learning algorithms such as regression, decision trees, Bayesian models, and clustering.</li> <li>4. To explore advanced concept like reinforcement learning and enable students to model and evaluate machine learning solutions for different types of problems</li> </ol>

**Course Outcomes:**

*On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
CO1	Describe the machine learning techniques, their types and Applications.	Understanding
CO2	Apply mathematical concepts for feature engineering and perform dimensionality reduction to enhance model performance.	Apply
CO3	Develop similarity-based learning models for solving classification and prediction tasks.	Apply
CO4	Develop regression models, decision tree models and Bayesian models for solving classification and prediction tasks.	Apply
CO5	Utilize clustering algorithms to identify patterns in data and implement reinforcement learning techniques	Apply

**Mapping with POs and PSOs:**

Sl.no	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Introduction</b>				
1.1	Definition of Computer Vision, Image Formation: Geometric primitives and transformations- Geometric primitives	2	-	-
1.2	2D transformations, 3D transformations	2	-	-
1.3	Photometric image formation – Lighting, Reflectance and shading	2	-	-
1.4	The Digital Camera – Sampling and aliasing	2	-	-
<b>Module – 2: Image Processing</b>				
2.1	Point Operators – Pixel transforms, Color transforms, Compositing and matting	2	-	-
2.2	Histogram equalization, Tonal Adjustment	1	-	-

2.3	Linear Filtering – Separable filtering, Examples of linear filtering	2	-	-
2.4	Band pass and steerable filters	1	-	-
2.5	More neighborhood operators- Nonlinear filtering, Morphology, Distance transforms, Connected components	2	-	-
<b>Module – 3: Feature detection and matching</b>				
3.1	Points and patches – Feature detectors, Feature descriptors, Feature matching, Feature tracking, applications	3	-	-
3.2	Performance-driven animation; Edges – Edge detection, Edge linking, Application: Edge editing and enhancement	3	-	-
3.3	Lines – Successive approximation, Hough transforms, Vanishing points	2	-	-
<b>Module – 4: Segmentation</b>				
4.1	Active Contours – Snakes, Dynamic snakes and Condensation, Scissors, Level Sets, Application: Contour tracking and rotoscoping	2	-	-
4.2	Split and merge – Watershed, Region splitting (divisive clustering), Region merging (agglomerative clustering)	2	-	-
4.3	Graph based segmentation, Probabilistic aggregation	2	-	-
4.4	Mean shift and mode finding – K-means and mixtures of Gaussians, Mean Shift, Normalized cuts; Graph cuts and energy-based methods.	2	-	-
<b>Module – 5: Feature- based alignment</b>				
5.1	2D and 3D feature-based alignment – 2D alignment using least squares, Application-Panography	2	-	-
5.2	Iterative algorithms, Robust least squares and RANSAC	2	-	-
5.3	3D alignment; Pose estimation – Linear algorithms, Iterative algorithms, Application: Augmented reality	2	-	-
5.4	Geometric intrinsic calibration - Calibration patterns, Vanishing Points.	2	-	-

**Code: BCS613C****Course: Compiler Design****Credits: 3****L:T:P - 3:0:0****SEE: 50 Marks****CIE: 50 Marks****SEE Hours: 3****Max. Marks: 100**

<b>Prerequisites if any</b>	Data Structures and Automata Theory
<b>Learning objectives</b>	<ol style="list-style-type: none"> <li>1. Specify and analyze the lexical, syntactic and semantic structures of advanced language features.</li> <li>2. Separate the lexical, syntactic and semantic analysis into meaningful phases for a compiler to undertake language translation.</li> <li>3. Gain appropriate knowledge build a compiler that converts from a non-trivial high level language to machine code.</li> </ol>

**Course Outcomes:**

*On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
<b>CO1</b>	Discuss the concepts and phases of compiler	<b>Understanding</b>
<b>CO2</b>	Develop the parsers and experiment with the knowledge of different parsers design	<b>Apply</b>
<b>CO3</b>	Implement the compiler using syntax-directed translation method and Classify various storage allocation strategies and symbol table representation	<b>Apply</b>
<b>CO4</b>	Generate machine code from the source code of a novel language	<b>Analyze</b>

**Mapping with POs and PSOs:**

**Course Structure**

Sl.no	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Lexical Analysis and Top Down Parsing</b>				
1.1	Compilers, Compiler-construction tools	1	-	-
1.2	The phases of a compiler	1	-	-
1.3	The role of the lexical analyzer, Input buffering	1	-	-
1.4	Specification of tokens, Recognition of tokens	1	-	-
1.5	The role of the parser, Top-down parsing	4	-	-
<b>Module – 2: Bottom Up Parsing</b>				
2.1	Bottomup parsing, Types of Bottom up parsing	1	-	-
2.2	Operator-precedence parsing	1	-	-
2.3	LR parsers	2	-	-
2.4	SLR parsers	2	-	-
2.5	LALR parsers	2	-	-
<b>Module – 3: Syntax-Directed Translation</b>				
3.1	Syntax-directed definitions, Construction of syntax trees	1	--	-
3.2	Bottom-up evaluation of S-attributed definitions	1	-	-
3.3	L-attributed definitions	1	-	-
3.4	Intermediate languages	1	-	-
3.5	Declarations, Assignment statements	1	-	-
3.6	Boolean expressions, Case statements	1	-	-
3.7	For and While Statements	1	-	-
3.8	Back Patching, Procedure calls	1	-	-
<b>Module – 4: Run-Time Environments</b>				
4.1	Source language issues	1	-	-
4.2	Storage organization	1	-	-
4.3	Storage-allocation strategies	1	-	-

4.4	Access to nonlocal names, parameter passing	2	-	-
4.5	Symbol tables	1	-	-
4.6	Dynamic storage allocation techniques	2	-	-
<b>Module – 5: Code generation</b>				
5.1	Issues in the design of a code generator,	1	-	-
5.2	The target machine, Run-time storage management	1	-	-
5.3	Basic blocks and flow graphs,	2	-	-
5.4	The dag representation of basic blocks,	1	-	-
5.5	Code-generator generators	1	-	-
5.6	A Simple code generator- Register allocation and assignment	2	-	-

<b>Prerequisites if any</b>	Probability , Statistics and Linear Algebra
<b>Learning objectives</b>	To gain insights on different concepts and methods used in Artificial intelligence to solve real world problems.

**Course Outcomes:**

*On the successful completion of the course, the student will be able to*

<b>COs</b>	<b>Course Outcomes</b>	<b>Bloom's level</b>
CO1	Understand Artificial Intelligence concepts and methods.	Understand
CO2	Use knowledge representation to solve real world problems	Apply
CO3	Use neural networks to solve real world problems	Apply
CO4	Solve problems using classification and clustering techniques.	Apply

**Mapping with POs and PSOs:**

Sl. No.	Module Name	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Introduction</b>				
1.1	Introduction	1		
1.2	Characteristics	1		
1.3	Exhaustive Searches	1		
1.4	Heuristic Search Techniques	1		
1.5	Iterative Deepening	1		
1.6	Constant satisfaction	1		
1.7	General problem solving	1		
<b>Module – 2: Problem reduction and Logic concepts</b>				
2.1	Bounded look ahead strategy	1		
2.2	Alpha-Beta Pruning	1		
2.3	Propositional calculus	1		
2.4	Propositional logic	1		
2.5	Natural Deduction system	1		
2.6	Axiomatic system	1		
2.7	Semantic tableau system in propositional logic	1		
2.8	resolution refutation in propositional logic and Predicate logic	2		
<b>Module – 3: Advanced problem-solving paradigm</b>				
3.1	Planning- types of planning systems	2		
3.2	Linear planning using a goal stack	1		
3.3	Non –linear planning strategies	1		
3.4	Means-ends analysis	1		
3.5	Knowledge representation using semantic network	1		
3.6	Extended semantic networks for KR	1		
3.7	Knowledge representation using frames	1		

<b>Module – 4: Uncertainty Measure</b>				
4.1	Probability Theory	2		
4.2	Bayesian Belief Networks	3		
4.3	Machine Learning Paradigms	3		
<b>Module – 5: Support vector Machine, case-based reasoning and learning ANN</b>				
5.1	Single Layer and Multilayer	1		
5.2	RBF	1		
5.3	Design issues in ANN	1		
5.4	Recurrent Network	1		
5.5	Deductive learning,	2		
5.6	Clustering	2

Sl. No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module –1: Introduction</b>				
1.1	<b>Introduction:</b> What is Data Science?	1	-	-
1.2	Big Data and Data Science hype – and getting past the hype,	1	-	-
1.3	Why now? – Data fiction, Current landscape of perspectives, A Data Science Profile, Thought Experiment: Meta-Definition, OK, So What Is a Data Scientist, Really?	1	-	-
1.4	Needed Statistical Inference: Statistical Thinking in the Age of Big Data, Statistical Inference, Populations and samples, Populations and Samples of Big Data, Big Data Can Mean Big Assumptions	1	-	-
1.5	Modeling: What is a model? Statistical modeling, Probability distributions, Fitting a model, Overfitting	2	-	-
1.6	R Programs for the algorithms	1	-	-
<b>Module –2: Exploratory Data Analysis and Data Science Process</b>				
2.1	<b>Exploratory Data Analysis and the Data Science Process:</b> Basic tools (plots, graphs and summary statistics) of EDA	1	-	-
2.2	Philosophy of EDA	1	-	-
2.3	The Data Science Process, A Data Scientist's Role in This Process	1	-	-
2.4	Algorithms: Machine Learning Algorithms, Three Basic Algorithms: Linear Regression	2	-	-
2.5	k-Nearest Neighbors (kNN)	1	-	-
2.6	k-means Clustering	1	-	-
2.7	Comparison of these three algorithms	1	-	-
<b>Module –3: Machine Learning Algorithm and Usage in Applications</b>				
3.1	<b>Machine Learning Algorithm and Usage in Applications:</b> Spam Filter, Linear Regression and Spam Filter, Filtering Spam,	1	-	-
3.2	K-NN and spam Filter	2	-	-
3.3	Naïve Bayes Algorithm, Spam Filter using Naïve Bayes, Laplace Smoothing, Comparing Naïve Bayes to K-NN Motivating application.	3	-	-
3.4	Data Wrangling: APIs and other tools for scraping the Web	2	-	-
3.5	introduction to Logical Regression and M6D case study	1	-	-
<b>Module –4 : Extracting Meaning from Data</b>				
4.1	<b>Extracting Meaning from Data:</b> The Kaggle Model	1	-	-
4.2	Example: User (customer) retention.	1	-	-
4.3	Feature Generation (brainstorming, role of domain expertise, and place for imagination)	1	-	-
4.4	Feature Selection algorithms: Filters; Wrappers	1	-	-
4.5	Decision Trees;	1	-	-
4.6	Random Forests	1	-	-
<b>Module –5: Recommended system and Data Engineering</b>				
5.1	Recommendation Systems: A Real-World Recommendation Engine,	1	-	-

	Some Problems with Nearest Neighbors			
5.2	Beyond Nearest Neighbor: Machine Learning Classification	1		
5.3	The Dimensionality Problem	1		
5.4	Singular Value Decomposition.	1		
5.5	Data Engineering, Map reduce, ,	1		
5.6	Word Frequency Problem	1		
5.7	Map Reduce Solution			
5.8	Other Examples of Map Reduce, Pregel-An Introduction.	1		
5.9	Data Visualization: Basic principles.	1		
5.10	Ideas and tools for data visualization.	1

**Course Structure**

SL.NO	Programs
1	Understand the Basic Python Libraries such as math, NumPy, Pandas, Matplotlib
2	For a given set of training data examples stored in a .CSV file, implement and demonstrate the Find-S algorithm to output a description of the set of all hypotheses consistent with the training examples. <b>Book 1: Chapter 3</b>
3	Develop a program to implement k-Nearest Neighbour algorithm to classify the randomly generated 100 values of x in the range of [0,1]. Perform the following based on dataset generated. a. Label the first 50 points $\{x_1, \dots, x_{50}\}$ as follows: if $(x_i \leq 0.5)$ , then $x_i \in \text{Class1}$ , else $x_i \in \text{Class1}$ a. Classify the remaining points, $x_{51}, \dots, x_{100}$ using KNN. Perform this for $k=1,2,3,4,5,20,30$ <b>Book 2: Chapter – 2</b>
4	Develop a program to demonstrate the working of Linear Regression <b>Book 1: Chapter – 5</b>
5	Develop a program to demonstrate the working of Polynomial Regression. <b>Book 1: Chapter – 5</b>
6	Develop a program to demonstrate the working of the decision tree algorithm. Use Breast Cancer Data set for building the decision tree and apply this knowledge to classify a new sample. <b>Book 2: Chapter – 3</b>
7	Develop a program to implement k-means clustering using Wisconsin Breast Cancer data set and visualize the clustering result. <b>Book 2: Chapter – 4</b>
8	Write a program to implement the naïve Bayesian classifier for a sample training dataset stored as a .CSV file. Compute the accuracy of the classifier, considering few test datasets. <b>Book 1: Chapter – 8</b>
9	Develop a program to Implement the Q-Learning Algorithm <b>Book 1: Chapter – 14</b>

**Code: BCSL657A****Course: Progressive App Development****Credits: 1****L:T:P - 0:0:2****SEE: NA****CIE: 50 Marks****SEE Hours: NA****Max. Marks: 50**

<b>Prerequisites if any</b>	Basic Web Development Knowledge, Understanding of Client-Server Architecture and Basic programming skills
<b>Learning objectives</b>	To bridge the gap between fundamental web development skills and advanced PWA development, ensuring students are well-equipped to create modern, performant, and user-friendly web applications.

**Course Outcomes:**

*On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
CO1	Develop and deploy Progressive Web Apps (PWAs) with offline capabilities and responsive design.	Understanding
CO2	Implement modular applications using microservices architecture and integrate third-party RESTful APIs	Apply
CO3	Apply cloud services for deployment and manage continuous integration/continuous deployment (CI/CD) pipelines.	Apply
CO4	Optimize the performance and security of web applications.	Analyze

**Mapping with POs and PSOs:**

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	-	3	-	3	-	-	-	-	-	-	-	2	-
CO2	3	2	3	-	3	-	-	-	-	-	-	-	-	2
CO3	3	2	3	-	3	-	-	-	2	-	-	3	2	-
CO4	3	3	3	-	3	-	-	-	-	-	-	-	-	2

**Mapping Strength: Strong– 3      Medium – 2      Low – 1**

*B E Blown up syllabus- III year*

**Course Structure**

Sl.No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
1.	Implement a service worker to cache assets and enable offline functionality in your PWA.	-	-	1
2.	Use CSS techniques and frameworks (e.g., Flexbox, Grid, Bootstrap) to ensure your PWA is fully responsive across different devices.	-	-	1
3.	Implement the Push API and Service Workers to enable push notifications in your PWA.	-	-	1
4.	Create, containerize using Docker, and deploy a simple microservice.	-	-	1
5.	Fetch data from the API and display it in your application using JavaScript or a framework like React.	-	-	1
6.	Apply user-centric design principles to improve the usability and accessibility of your application.	-	-	2
7.	Deploy your application to a cloud service (e.g., AWS, Azure, Google Cloud) and ensure it scales effectively.	-	-	2
8.	Configure a CI/CD pipeline using tools like Jenkins, GitHub Actions, or GitLab CI for automated testing and deployment.	-	-	2
9.	Implement techniques to improve load time and overall performance, such as code splitting, lazy loading, and caching strategies	-	-	2
10.	Apply security best practices to mitigate common vulnerabilities, such as input validation, using HTTPS, and securing APIs.	-	-	2
<b>Total No. of Lecture Hours</b>		-	-	-
<b>Total No. of Tutorial Hours</b>			<b>00</b>	-
<b>Total No. of Practical Hours</b>				<b>15</b>

**Textbook:**

1. Jason Grigsby, Progressive Web Apps", A Book Apart, 2018
2. Tal Ater, Building Progressive Web Apps, O'Reilly Media, Inc., 2017

**Code: BCSL657B****Course: Tosca – Automated Software Testing****Credits: 1****L:T:P - 0:0:2****SEE: NA****CIE: 50 Marks****SEE Hours: NA****Max. Marks: 50**

<b>Prerequisites if any</b>	Any Programming language, Discrete Mathematical structures
<b>Learning objectives</b>	<ul style="list-style-type: none"> <li>• Gain a deep understanding of Tosca's core concepts and functionalities</li> <li>• Learn efficient automation of test cases using Tosca.</li> <li>• Develop expertise in creating effective and reusable test designs.</li> <li>• Acquire skills for building robust automated test scripts</li> </ul>

**Course Outcomes:***On the successful completion of the course, the student will be able to*

<b>COs</b>	<b>Course Outcomes</b>	<b>Bloom's level</b>
CO1	Demonstrate the creation and management of modules with a strong grasp of identification methods	Apply
CO2	Understand the fundamentals of Tricentis Tosca and its advantages over other automation tools	Understanding
CO3	Enhance testing efficiency and quality through effective Tosca automation	Apply

**Mapping with POs and PSOs:**

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12		PSO1	PSO2
CO1	2	-	2	-	3	-	-	-	-	-	-	-		-	-
CO2	2	-	2	-	2	-	-	-	-	-	-	-		-	-
CO3	3	-	3	-	3	-	-	-	-	-	-	-		3	3

**Mapping Strength: Strong– 3    Medium – 2    Low – 1**

**Course Structure**

Sl. No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1:</b> Automate Web Applications, Desktop Application Testing&API Testing				
1.1	Practice creating automated tests for simple HTML applications using Tosca's capabilities <sup>1</sup> .	-	-	2
1.2	Develop test cases for desktop applications and understand the integration with Tosca.	-	-	2
1.3	Learn to automate API testing and validate responses using Tosca	-	-	1
<b>Module – 2:</b> Mobile Testing, Data-Driven Testing&Risk-Based Testing				
2.1	Execute automated tests on mobile applications and explore Tosca's mobile testing features.	-	-	2
2.2	Implement data-driven tests to validate application behavior under various data sets.	-	-	2
2.3	Apply risk-based testing methods to prioritize test execution based on business impact.	-	-	2
<b>Module – 3:</b> Continuous Integration&Test Data Management				
3.1	Integrate Tosca with CI/CD pipelines for continuous testing practices	-	-	2
3.2	Manage and maintain test data efficiently using Tosca's test data management tools.	-	-	2
<b>Total No. of Lecture Hours</b>		-	-	-
<b>Total No. of Tutorial Hours</b>			-	-
<b>Total No. of Practical Hours</b>				<b>15</b>

**Textbook:**

1. Tricentis Tosca Fundamentals: A comprehensive guide to automating web application testing with Tosca<sup>4</sup>.
2. Introduction to Tosca Automation Testing: Detailed course curriculum for Tosca Automation Testing<sup>6</sup>

**Reference Book:**

1. Tosca Training Curriculum by Croma Campus: Industry-oriented training material aligned with certification exams

**Code: BCS657C****Course: Agile Development****Credits: 1****L:T:P - 1:0:0****SEE: NA****CIE: 50 Marks****SEE Hours: NA****Max. Marks: 50**

<b>Prerequisites if any</b>	Nil
<b>Learning objectives</b>	<ol style="list-style-type: none"> <li>1. To Recognize the importance to be Agile</li> <li>2. To understand basics of agile</li> <li>3. To become Expert in Agility</li> </ol>

**Course Outcomes:***On the successful completion of the course, the student will be able to*

COs	Course Outcomes	Bloom's level
CO1	Understand the Agile Process, its history and development	Understand
CO2	Describe the concept of Agility in Agile process.	Understand
CO3	Discuss the theories of Agile management, classification of agile methods and agility in design & testing effectively	Understand

**Mapping with POs and PSOs:**

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	-	-	-	-	3	-	-	-	-	-	-	-	-	-
CO2	-	-	2	-	3	-	-	-	2	-	-	-	-	-
CO3	-	-	2	-	3	-	-	-	2	-	-	-	2	2

**Mapping Strength: Strong– 3    Medium – 2    Low – 1**

**Course Structure**

Sl.No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Agile</b>				
1.1	<b>Agile? :</b> Understanding Success, Beyond Deadlines, The Importance of Organizational Success, Enter Agility	1	-	-
1.2	How to Be Agile?: Agile Methods, Don't Make Your Own Method, The Road to Mastery, Find a Mentor.	1	-	-
1.3	The Genesis of Agile, Introduction and background, Agile Manifesto, and Principles, Simple Design, User Stories, Agile Testing, Agile Tools	2	-	-
<b>Module – 2: Mastering Agility</b>				
2.1	<b>Mastering Agility :</b> Values and Principles: Commonalities, About Values, Principles, and Practices, Further Reading	1	-	-
2.2	Improve the Process: Understand Your Project, Tune and Adapt, Break the Rules	1	-	-
2.3	Rely on People :Build Effective Relationships, Let the Right People Do the Right Things, Build the Process for the People	1	-	-
2.4	Eliminate Waste :Work in Small, Reversible Steps, Fail Fast, Maximize Work Not Done, Pursue Throughput	2	-	-
<b>Module – 3: Agile Methodology</b>				
3.1	Theories for Agile management – agile software development – traditional model vs. agile model -	1	-	-
3.2	Classification of agile methods – agile manifesto and principles – agile project management	2	-	-
3.3	Agile team interactions – ethics in agile teams	1	-	-
3.4	Agility in design, testing – agile documentations – agile drivers, capabilities and values	2	-	-
<b>Total No. of Lecture Hours</b>		<b>15</b>	-	-
<b>Total No. of Tutorial Hours</b>			<b>00</b>	-
<b>Total No. of Practical Hours</b>				<b>00</b>

**Course Structure**

Sl. No	Modules	No. of Lecture Hours	No. of Tutorial Hours	No. of Practical Hours
<b>Module – 1: Introduction to Devops and its Principles</b>				
1.1	Introduction to DevOps and its Principles: Understanding DevOps: Definition, goals, and benefits	1	-	-
1.2	Key principles of DevOps: Continuous integration, continuous delivery, automation, and collaboration	1		
1.3	DevOps culture and mindset, Case studies of successful DevOps implementations	1		
1.4	Version Control and Collaboration Tools: Introduction to version control systems (e.g., Git)	1		
1.5	Branching and merging strategies, Collaborative development workflows, Introduction to code review processes and tools(example GITHUB, Bit bucket)	1		
<b>Module – 2: Continuous Integration and Build Automation</b>				
2.1	Continuous integration (CI) concepts and benefits	1	-	-
2.2	Introduction to build automation tools (e.g., Jenkins, Travis CI)	1	-	-
2.3	Configuring and managing CI pipelines, running automated tests and generating reports	1	-	-
2.4	Infrastructure as Code (IaC): Introduction to Infrastructure as Code (IaC) and its benefits	1	-	-
2.5	Infrastructure provisioning tools (e.g., Terraform, CloudFormation), Building and managing infrastructure using IaC	1	-	-
<b>Module – 3: Configuration Management</b>				
3.1	Introduction to configuration management tools (e.g., Ansible, Puppet)	1	-	-
3.2	Managing system configurations and deployments	1	-	-
3.3	Configuration drift and remediation, Automating software deployments	1	-	-

3.4	Continuous Delivery and Deployment: Introduction to continuous delivery and deployment concepts	1	-	-
3.5	Release management and versioning, Automating deployment pipelines	1	-	-
